

SAVE CENTS

MAKE SENSE

Not all filters are equal. While other filters may be lower priced, it's important to know they provide significantly less protection. And with today's sophisticated engine and other component systems, that's a risk that just doesn't make sense to take.

Only Cat Filters have these quality design features:

- One-piece molded end caps prevent leaks
- Acrylic beads prevent pleat bunching
- Spiral roving keeps pleats from "moving"
- Nonmetallic center tubes to protect your engine

Because Cat Filters are made better, they provide consistent performance to protect your engine, drive train, and hydraulic systems. While other filter brands may fit, Cat Filters offer the superior quality and protection you need to maximize your engine and other component system's life.
